For rights of reproduction or translation of this publication, in part or in toto, application should be made to the Director, Caribbean Food and Nutrition Institute (CFNI), P.O. Box 140, Mona, Kingston 7, Jamaica. CFNI welcomes such applications.

The views expressed in this publication are those of the authors and not necessarily those of PAHO/WHO.

Caribbean Food and Nutrition Institute is a specialized centre of the Pan American Health Organization (PAHO) which represents the World Health Organization (WHO) in the Region of the Americas. In addition to its parent body, PAHO/WHO, the Institute is also responsible to an Advisory Committee on Policy which the member governments form the majority. Technically, it is guided by a Specific Advisory Committee, the members of which are selected on the basis of their technical expertise in the field of food and nutrition.

FOREWORD

The second edition of the Food Composition Tables for the English-speaking Caribbean has been in the making for more than a decade. It evolved in response to the need to have an updated data base on the nutrient composition of foods — raw, processed and prepared — to assess the results of dietary surveys, quantify food balance data, develop food baskets for member countries, assess personal dietary intake and facilitate nutrition education and training.

It builds on the first edition which has been in use for two decades, having been published in 1974 from work begun in 1968 and accelerated in 1971. Drs. J.I. McKigney and Y.H. Yang, then Deputy Directors of the Caribbean Food and Nutrition Institute (CFNI), along with other members of the Institute, and an informal committee of representatives from the Ministry of Health, the Scientific Research Council and the Botany Department of the University of the West Indies, Jamaica, were largely responsible for collating data for that edition. Those data were drawn mainly from work done at the Institute of Nutrition of Central America and Panama (INCAP) in the 1950s. In order to meet the demands of students and teachers for whom it has been a reference text, the publication was reprinted twice. The limitations of the range of nutrients and foods, especially prepared foods, were evident. CFNI therefore took up the challenge to remedy this.

After noting the comments of nutritionists, dietitians and other users for some time, CFNI, in 1984, commissioned Reg Clarke Associates of Barbados to prepare a computerized data set to update Table 1 — Values per 100 grams Edible Portion. That Organization obtained most of the data from publications of the United States Department of Agriculture (USDA).

In 1992 CFNI contracted Mrs. Beverley Spaulding, Nutritionist in private practice, Jamaica, to work in association with its Nutrition Educator, Mrs. Versada Campbell to review and edit those data. Newer data were found. This compilation comprises updated data mainly from USDA, McCance and Widdowson's "The Composition of Foods" and its various supplements including Immigrant Foods, United Kingdom (UK), and the Food Intake Analysis System (FIAS) on Puerto Rican Foods developed by the University of Texas Health Science Center in association with the USDA Human Nutrition Services.

The current Tables contain 901 food items divided into 15 groups including composite dishes modified from the FIAS. The foods are listed in alphabetical order in each food group and a profile of the moisture, energy, dietary fibre and 17 nutrients in 100 gram edible portion are given. Also included are percentages for refuse as purchased. Energy values are documented in kilocalories and kilojoules. Values for saturated fat, cholesterol, potassium, sodium, zinc, folacin and B_{12} (cyanocobalamin) have been added to the original 10 listed in the first edition. Each food item is preceded by a reference number and the source of the data for that item is indicated in the 'reference' column on the page on which the proximate composition of the item appears.

The description of the food and its reference number are repeated on the page with the mineral and vitamin content. The abbreviations and symbols used, the derivation and structure of the tables and how to use them are explained in the following section. Indices of the common and scientific names of the foods in the tables are provided, and lists of ingredients in composite dishes/prepared foods are annexed.

Final review of the Tables was undertaken by Mrs. Patricia Thompson, Nutritionist, assisted by Mr. Agiel Duhaney and Mr. Donovan Grant. Miss Faith Roberts, Miss Karlene Russell, Miss Janice Tai and Mrs. Michelle Tappin-Lee were responsible for the type-setting and proof-reading of the Tables. The Tables were revised in 1998 by Miss Audrey Morris, Nutritionist.

EXPLANATION OF THE FOOD COMPOSITION TABLES

1. SOURCES OF DATA

1.1 ***Analytical Data.*** Food values contained in this publication have been drawn largely from available sources which are given in the references.

The numbers in the 'reference' column indicate the sources for the individual food items. Frequent use has been made of the USDA Human Nutrition Information Service Handbooks for raw and processed foods, the University of Texas FIAS data base for Puerto Rican foods and the United Kingdom's collation of immigrant and other foods consumed frequently by its people.

1.2 ***Selection of Food Items.*** The food items included in the tables are those commonly found in municipal and parish markets, supermarkets, local shops and in street vending and prepared in homes throughout the Caribbean.

1.3 ***Limitations of Data.*** Since most of the values used in the tables were taken from other food composition tables, the data may not be representative of the area as desired, particularly in relation to the moisture content of the staple foods and vitamin content of processed foods, fresh vegetables and fruits. Many edible plant and fish species used in the Caribbean could not be found in other food composition tables and are therefore excluded from this compilation.

2. FOOD GROUPING AND LISTING

2.1 Foods in the tables are grouped under 15 headings the first 14 of which are in the sequence suggested by the Food and Agriculture Organization (FAO) of the United Nations for reporting food consumption surveys or compilation of food balance sheets.

The groups are as follows:

1. Cereals
2. Starchy Fruits, Roots and Tubers (ground provisions/produce)
3. Sugars and Syrups
4. Pulses, Nuts and Oil Seeds
5. Green, Leafy and Yellow Vegetables
6. Other Vegetables
7. Fruits
8. Meats
9. Poultry and Other Meats
10. Eggs
11. Fish and Shell Fish
12. Milk and Milk Products
13. Fats and Oils
14. Miscellaneous Foods
15. Composite Dishes/Prepared Foods

2.2 Within a food group, the foods are listed in alphabetical order by the common names and the scientific names are given in parenthesis. Different common names are often used in various Caribbean countries for the same food item; for example chocho is also known as christophene. The alternate names appear in some cases. (See the CFNI publication "Edible Fruits and Vegetables of the English-speaking Caribbean" for more on alternate names). Food may be consumed at various stages of maturity and in different forms. Values for these different forms are given under the heading of that food.

2.3 Cross reference is made to foods that could be classified in different groups. Thus, for instance, green pigeon peas could be grouped in **4. Pulses, Nuts and Oil Seeds** or, in **5. Vegetables.** In such a case, the name of green pigeon peas also appears, without a reference number assigned in the latter group, and the user is advised to (see item ..... for the relevant food value). All data for pigeon peas appear under **Pulses, Nuts** and **Oil Seeds** but there is also a cross reference in **Vegetables.**

2.4 For easy comparison, foods of a similar nature are grouped under one heading, such as baby foods (items 0932—0958) and canned soups (items 0981—0995).

2.5 The food items are numbered consecutively within and between groups. Some groups now have more than 100 items. The original scheme of beginning each group with 101, 201, 301, etc., cannot therefore, be maintained.

3. WATER AND NUTRIENT CONTENT

3.1 ***Proximate Components.*** Data for water are given as grams in the edible portion of the food. Food energy is expressed in terms of both kilocalories (kcal) and kilojoules (kJ). The data are for physiological energy values and represent the energy value remaining after the losses in digestion and metabolism have been deducted. Caloric factors are based on the Atwater System for determining caloric values, that is, generally 4 kilocalories per gram of carbohydrate and protein and 9 kilocalories per gram of fat. Kilocalories were converted to kilojoules using the factor 4.184 (4.2). However, specific factors were used for the determination of the energy contribution of carbohydrate, fat and protein in some foods, and these are given in the Table on pages x and xi.

The values for fat represent those food components soluble in ethyl ether, including free fats, fatty acids, lecithin and some pigments. They may be referred to as 'crude fat', 'total fat' or 'ether extract'.

The carbohydrate value is usually the difference between 100 and the sum of the percentages of water, protein, fat and ash. Thus carbohydrate values include fibre. Dietary fibre occurs only in foods from plants. Where data were not available, crude fibre values were used. Crude fibre is that component of food from plants which remains after acid treatment. It represents only a portion of the total fibre content of the food.

3.2 ***Minerals.*** Data on the content of five mineral elements are included in the tables. Potassium, sodium and zinc have been added to the minerals that were reported in the 1974 Tables. The mineral values represent the total amounts present in the food and include those amounts, if any, added to the product in preparation for the retail market. The values do not necessarily represent the amount of the mineral element available to the body. Availability is affected by many factors and a multiplicity of conditions about which present information is inadequate.

3.3 ***Vitamins.*** Ascorbic acid values are expressed in terms of reduced ascorbic acid. The values for niacin do not include the niacin contributed by tryptophan, a niacin precursor. The values for vitamin A, in the publication are expressed in Retinol Equivalents (R.E.), instead of International Units (I.U.) used in some publications. Carotenes are included in the vitamin A values. The relationship between the units is as follows:

INTERNATIONAL UNITS (I.U.)

1 I.U. = 0.3 microgram (μg) retinol

1 I.U. = 0.6 microgram (μg) beta-carotene

RETINOL EQUIVALENTS (R.E.)

1 R.E. = 1 μg retinol

1 R.E. = 6 μg beta-carotene

1 R.E. = 12 μg other provitamin in plant foods

Cyanocobalamin (Vitamin B_{12}) is not present in plant foods.

Percentage losses of vitamins in leafy vegetables during cooking are given by the UK analysts as follows:

Carotene	-	0	Niacin	-	40
Vitamin B_1	-	40	Vitamin C	-	70
Vitamin B_2	-	40	Total folic acid	-	20—40

3.4 ***Refuse.*** Some foods purchased from markets are not necessarily all edible. The values for refuse expressed in percentage of weight of foods as purchased are merely simple estimates. The variability could be very large depending on the quality of food and preparation practices in different households. The percentage refuse is included to facilitate the calculation of the approximate amounts to purchase to derive a given edible amount.

3.5 ***Raw and Cooked Food.*** Except where specified, the values in this publication are for raw foods. When food is cooked or otherwise prepared, there may be a considerable change of weight and possible loss of nutrients. Some computer data bases include factors for gain or loss in weight of cooked or otherwise prepared food.

3.6 ***Cholesterol.*** A fat-like substance which occurs only in foods of animal origin, particularly in organ meats, eggs and some shellfish. It is associated with the diet-related chronic, non-communicable diseases such as coronary artery disease which could lead to heart attack.

3.7 ***Saturated Fat.*** Saturated fat includes primarily butyric, palmitic and stearic fatty acids. It has been singled out because of its association with the chronic, diseases. Values in some tables are given as a percentage of 100 grams fat. The values in these revised Tables are presented per 100 grams of food.

3.8 ***Alcohol.*** Alcohol is almost as efficient as fat in providing calories. One gram of alcohol provides 7 calories (29 kJ). The alcohol content of beers, wines, rum, whisky and gin is expressed as % alcohol by volume. In these tables the values for alcohol are given as g/100 mL of alcoholic beverages. The relationship of % alcohol by volume and alcohol (g/100 mL) is as follows:

% Alcohol by Volume	Alcohol (g/100 mL)
5	4.0
10	7.9
15	11.9
20	15.6
25	19.8
30	23.7
35	27.7
40	31.6

NOTE: The specific gravity of pure ethyl alcohol is 0.79. **Multiplying** % alcohol by Volume by 0.79 converts to g/100 mL. To convert g/100 mL to alcohol by Volume **divide** the values by 0.79.

4. ABBREVIATIONS AND SYMBOLS USED IN TABLES

g	=	gram
mg	=	milligram
mL	=	millilitre
μg	=	microgram
spp	=	species
%	=	percent
tr	=	negligible amount or trace
-	=	no data available or available data not reliable
0	=	none; containing none of the specific nutrient
( )	=	calculated values
kcal	=	kilocalories
kJ	=	kilojoules

5. WEIGHT CONVERSION FACTORS

	Kilogram	100g	Gram	Pound	Ounce
Kilogram	1	10	1000	2.205	35.28
100g	0.1	1	100	0.2205	3.528
Gram	0.001	0.01	1	0.0022	0.035
Pound	0.4536	4.536	453.6	1	16
Ounce	0.02835	0.2835	28.35	0.0625	1

6. ENERGY CONVERSION

1 Kcal	=	4.184 kJ
1000 Kcal	=	4.184 MJ
1 MJ	=	239 kcal
1 kJ	=	1000 joules
1 MJ	=	1 million joules (10^6)

USING THE TABLES

These tables are useful sources for reference to the nutritive value of some foods commonly eaten in the Caribbean. They do not provide information on all the foods eaten neither do they give values for all the nutrients.

They can be used for many different purposes. Each has its own requirements for food items and range of nutrients in the food tables and different levels of accuracy from the calculations.

1. Calculation of nutrient intakes from food consumption records:
   - for the population of a country where the food supplies are measured in raw commodities
   - for the individual where food has been measured as consumed
2. Formulation of diets or food supplies that will provide a specific intake of nutrient. Calculations can be made at several different levels, e.g.:
   - international agency's estimates of desirable food supplies for a country or region
   - individual — dietitian's/nutritionist's formulation of a diet according to a physician's diet order
3. Calculations of the nutrient composition of a manufactured food or recipe from its ingredients.

FACTORS USED FOR CALCULATING THE CALORIC VALUE OF FOODS

Food and Description	Protein Cal/g	Fat Cal/g	Carbohydrate by difference Cal/g
Cereals			
Corn, whole	2.73	8.37	4.03
Cornmeal, degermed	3.46	8.37	4.16
Oatmeal	3.46	8.37	4.12
Rice, white	3.82	8.37	4.16
Rye flour, whole grain	3.05	8.37	3.86
Rye flour, light	3.41	8.37	4.03
Sorghum, whole	0.91	8.37	4.07
Wheat, 70–74% extraction	4.05	8.37	4.12
Wheat bran	1.82	8.37	2.35
Other cereals, refined	3.87	8.37	4.12
Starchy Fruits, Roots & Tubers			
Potatoes & starchy roots	2.78	8.37	4.03
Sugars			
Cane sugar	-	-	3.87
Glucose	-	-	3.68
Pulses, Nuts & Oil Seeds			
Mature dry	3.47	8.37	4.07
Immature	3.47	8.37	4.07
Soybean flour	3.47	8.37	4.07
Vegetables			
Mushrooms	2.62	8.37	3.48
Other underground crops[1]	2.78	8.37	3.84
Other vegetables	2.44	8.37	3.57

FACTORS USED FOR CALCULATING THE CALORIC VALUE OF FOODS (Cont'd)

Food and Description	Protein Cal/g	Fat Cal/g	Carbohydrate by difference Cal/g
Fruits			
All (except lemons, limes)	3.36	8.37	3.60
All fruit juice (except lemon, limes) unsweetened	3.36	8.37	3.92
Lemons, limes	3.36	8.37	2.48
Lemon juice & lime juice, unsweetened	3.36	8.37	2.70
Meat & Poultry[2]	4.27	9.02	-
Eggs	4.36	9.02	3.68
Fish & Shellfish[3]	4.27	9.02	-
Milk & Milk Products	4.27	8.79	3.87
Fats & Oils			
Butter	4.27	8.79	3.87
Other animal fats	-	9.02	-
Vegetable fats and oils	-	8.84	-
Miscellaneous Foods			
Alcohol[4]	-	-	-
Chocolate, cocoa	1.83	8.37	1.33
Vinegar	-	-	2.40
Yeast	3.00	8.37	3.35

[2]Carbohydrate factor, 3.87 for brain, heart, kidney, liver; 4.11 for tongue
[3]Carbohydrate factor, 4.11 for shellfish
[4]6.93 calories per gram of ingested alcohol

VARIATIONS IN FOOD COMPOSITION

Foods are unique in their individual make up yet each has some of the characteristics of others. Some foods are richer sources of nutrients than others; so foods are grouped by type of origin. Foods from the same group are used interchangeably in meal planning. The groupings given in the tables are based on FAO recommendation for compiling Food Consumption Survey data.

Very few foods have a constant composition. Foods are biological materials, and as such, show considerable variation in composition. Their values may differ as nature produces them. For example, two oranges — even from the same tree — might differ in vitamin C content. Such a difference need be of no concern for practical dietary planning. Variety, conditions of production, storage, kind and extent of processing and preparation are among the factors that affect the content of nutrients in our food supplies and in our foods prepared to eat. Values, once derived, may not apply to the foods indefinitely. New strains or varieties may be developed and changes introduced in storing conditions, processing, preserving and manufacturing. As a result, the values for the nutrients in foods change.

Manufactured foods are usually subjected to quality control and they might therefore have a constant composition. Some tolerance is permitted; so in practice, manufactured foods may be as variable in composition as some unprocessed foods.

Differences in analytical procedures may also result in differences in values particularly for estimations of dietary fibre which has now replaced most crude fibre values in the tables.

The values in the tables are mainly averages of results obtained from the analysis of representative samples of food items outside the region. The values for most of the foods are different from those in the first edition of these Tables.

RAW V/S COOKED FOODS

Most of the data are for the edible portion of raw food although most foods are eaten in the cooked form. Where raw and cooked forms are indicated, the values of some of the nutrients may be different. Values are also given for a limited range of cooked foods and ingredients are included for some prepared foods/composite dishes.

The composite dishes are modifications of those used in Puerto Rico, and were available through the Information Services of USDA. These values are solely estimates as recipes vary widely. Figures that would be tailored for a better fit to a particular item than the figures in the table can be obtained by calculation from ingredients.

CALCULATION OF NUTRIENT INTAKES

In calculating nutrient intakes decide which item in the tables corresponds with the item consumed. If there is no corresponding item use a related food, e.g., use the values for 'red kidney beans' if 'pink beans' were consumed. Check the index carefully because the food may be listed under a synonym or included in another food group.

Since the values in the tables are for the edible matter, it is necessary to apply the 'refuse as purchased' percentage to get the edible portion for the food being calculated as there needs to be adjustment for loss through wastage. For example, to find the values in 100 grams green banana (fig) as purchased:

Multiply the values per 100 gram edible in the table for green bananas, raw by (100 − 35%) = 65% or the factor 0.65.

In other words, since there is refuse, only a fraction of what is purchased is edible. If 1 kilogram (1000 grams) of bananas was purchased the values for that amount would be 6.5 times those in the tables. Adjustments for changes in weight during cooking are reflected in the values given for the composite dishes and in some software packages. Those changes may be noted in percentages or in factors. In the factorial system, 1 is used if there is no change, additions are made if there is an increase, e.g., 1.25 for a food that has absorbed 25% moisture or fat, and subtractions if there is a loss, e.g., 0.51 for fried bacon.

AVAILABILITY OF NUTRIENTS

Energy values are for metabolizable energy. That is, as utilized by the body. When foods are analyzed in a laboratory, energy values need to be adjusted to reflect how that food would be utilized in the body. Those values would be less as food is not completely burned in the body as when it is analyzed in a laboratory.

Values for available carbohydrate and unavailable carbohydrate (dietary fibre) are given but no attempt is made at giving availability figures for the other nutrients. Many foods contain unavailable forms of some nutrients, e.g., iron and nicotinic acid (vitamin B^3).

There are differences in availability of nutrients. The values in the tables represent the maximum that could be available to the body. The actual amount may be much smaller.

PROBABLE LEVELS OF ACCURACY

There are variations in the accuracy one can expect from food tables. Accuracy will depend on the appropriateness of the items in the tables. Calculated fat, sodium and iron intakes may differ greatly from analyzed values owing to variations in amounts of fat and salt used and contamination in the case of iron. Intakes of vitamin C and folate calculated from the Tables can be rather inaccurate — vitamin C being easily oxidized and folate bound, and unavailable to the body. When calculations are being done for individuals, the level of accuracy is improved when studies cover a longer period of time so that the size of the food sample considered is larger. The calculation of meals selected over 4 − 7 days would give a clearer picture of a person's energy and nutrient intake than calculations done for a single meal.

Index of Scientific Names

Scientific Name	Common Name	Item Number
Abelmoschus esculentus	Okra	0464-0465
Archirus spp.	Sole	0756
Acipenser spp.	Sturgeon fish	0757-0758
Agaricus campestris	Mushroom	0460-0463
Allium ascalonicum	Shallot	0474
Allium cepa	Onion, common green onion	0468-0469
Allium fistulosum	Escallion, Welsh onion	0452
Allium porrum	Leeks	0457-0458
Allium sativum	Garlic	0453-0454
Amaranthus spp.	Amaranth, Callaloo, Baghi	0350-0351
Anacardium occidentale	Cashew	0511, 0325-0328
Ananas comosus	Pineapple, pine	0555-0558
Anchoa spp.	Anchovy	0700
Annona muricata	Soursop	0568
Annona reticulata	Custard apple, bullocks heart	0518
Annona squamosa	Sweetsop, sugar apple	0572
Apium graveolens	Celery	0444-0445
Apsilus spp.	Snapper	0753
Arachis hypogaea	Peanuts	0314-0321
Arius maculatus	Catfish	0706
Artocarpus altilis	Breadfruit	0217-0219
Artocarpus heterophyllus	Jackfruit	0532
Asparagus officinalis	Asparagus	0352-0354
Avenia sativa	Oats	0123-0124
Bambusa spp.	Bamboo shoot	0438-0439
Benincasa hispida	Wax gourd, white gourd	0484-0485
Beta vulgaris	Beet, common red	0440-0441, 0360-0361
Beta vulgaris var cicla	Swiss chard	0385-0386
Blighia sapida	Ackee (Jamaican)	0434
Brassica chinensis	Pak choi, chinese cabbage	0374-0375
Brassica juncea	Mustard greens	0409
Brassica nigra	Mustard, table	0877
Brassica oleracea var. acephala	Kale, collard, bush cabbage	0402-0403, 0390-0391
Brassica oleracea var. botrytis	Broccoli, cauliflower	0442-0443, 0364-0367
Brassica oleracea var. capitata	Common cabbage	0376-0377
Brassica oleracea var. gemmifera	Brussel sprouts	0368-0371
Brassica pekinensis	Chinese cabbage, celery	0372-0373
Brassica rapa	Turnip	0429-0430, 0483

Scientific Name	Common Name	Item Number
Cajanus cajan	Pigeon peas, congo peas, gungo peas	0305-0306
Calamus spp.	Porgy	0743
Canavalia ensiformis	Horse bean, Jack bean	0278
Capsicum annuum	Pepper sweet	0416
Capsicum frutescens	Chilles, hot, dried, chilli powder	0414-0415
Caranx spp.	Jacks, Jack fish	0732
Caranx hippos	Cavalli	0712
Carcharhinus spp.	Shark	0752
Carica papaya	Pawpaw, papaya	0548-0549
Castanea spp.	Chestnuts	0329-0331
Cephalopholis spp.	Grouper	0724
Chelonia mydas	Turtle	0794-0795
Chrysophyllum cainito	Caimit, star apple	0509-0510
Cicer arietinum	Chickpea	0296
Cichorium endivia	Endive	0400
Cinnamomum zeylanicum	Cinnamon	0869-0870
Citrullus lanatus	Melon, water melon	0341, 0574-0576
Citrus aurantifolia	Lime	0494-0496
Citrus grandis	Shaddock, pomelo	0502
Citrus limon	Lemon	0492-0493
Citrus paradisi	Grapefruit	0487-0491
Citrus 'Putative X'	Ortanique	0501
Citrus reticulata	Tangerine, mandarin	0503-0504
Citrus sinensis	Orange	0497-0500
Clupea spp.	Herring	0727-0731
Cocos nucifera	Coconut	0332-0337
Colocasia spp.	Cocos, dasheen, taro	0388, 0224-0226
Colocasia esculenta	Dasheen	0394-0395
Coriandrum sativum	Coriander	0871-0872
Coroyphaena spp.	Dolphin	0714
Crassostrea spp.	Oyster	0785-0787
Cucumis melo	Muskmelon	0545
Cucumis melo var. cantalupensis	Canteloupe	0510
Cucumin sativus	Cucumber	0448-0449
Cucurbita maxima	Pumpkin	0419-0422, 0342-0343
Curcubita pepo	Squash, marrow	0472-0473
Curcuma domestica	Turmeric	0883-0884
Cyclopsetta chittendeni	Flounder	0721
Cynara scolymus	Artichoke	0435-0436
Cyphomandra betacea	Tree tomato	0482-0485

Glycine max	Soybean	0307-0313
Gossypium hirsutum	Cotton seed	0339
Haliotis spp.	Abalone	0780-0783
Helianthus annuus	Sunflower	0347-0349
Hibiscus sabdariffa	Sorrel	0566-0567
Hirudichthyes spp.	Flying fish	0722
Hordeum vulgare	Barley	0101-0102
Ipomoea aquatica	Ipomoea, Dry kangkong	0401
Ipomoea batatas	Sweet potato	0417-0418, 0239-0241
Juglans regia	Walnut	0338
Lablab purpureus	Butter bean (Indian), Banner bean, Bonavist	0278
Lactuca sativa	Lettuce	0404-0408
Lates calcarifer	Sea bass	0749
Lens culinaris	Lentils	0297
Leptodactylus spp.	Frog	0793
Linum usitatissimum	Flaxseed, Linseed	0340
Litchi chinesis	Lychee, litchi	0535-0538
Loligo spp.	Squid	0787-0792
Luffa aegyptiaca	Luffa, sponge gourd	0459

Scientic Name	Common Name	Item Number
Lupins Albus	Lupins	0298
Lutjanus spp.	Snapper	0753-0755
Lycoperscion esculentam	Tomato	0475-0481
Malpighia puniciforlia	West Indies cherry	0515-0516
Malus domestica	Apple	0505-0507
Mammea americana	Mammee apple	0539
Mangifera indica	Mango	0540-0543
Manihot esculenta	Cassava	0384, 0220-0223
Manilkara zapota	Sapodilla, naseberry	0565
Maranta arundinacea	Arrowroot	0212-0213
Melanogrammus aeglefinus	Haddock	0725-0726
Melicoccus bijugatus	Guinep, genip	0531
Mentha spp.	Mint	0876
Micropogon spp.	Croaker	0710-0711
Moringa oleifera	Drumstick leaves	0396-0399
Mugil spp.	Mullet, Queriman	0739
Muraenesox cinereus	Eel, pike eel	0715-0720
Musa paradisiaca	Plaintain	0227-0231
Musa sapientum	Banana	0214-0216
Mustelus spp.	Dog fish	0713
Mycteroperca spp.	Grouper	0724
Mythrax spp.	Crab	0772-0773
Nasturtium officinale	Water cress	0431
Octopus spp.	Octopus	0784
Ocyurus spp.	Snapper	0753
Olea europaea	Olives	0466-0467
Opuntia spp.	Prickly pear	0470
Oryza sativa	Rice	0125-0138
P. Mungo	Mung bean	0288-0289
Pachyrhizus erosus	Yam bean tuber	0245-0246
Panulirus spp.	Lobster	0774-0775
Passiflora edulis	Passion fruit/granadilla	0547
Passiflora quandrangularis	Granadilla/passion fruit	0547
Penaeus spp.	Shrimp	0776-0779
Peprilus paru	Pomfret	0742
Peprilus triacanthus	Butterfish	0703-0704

Index of Scientific Names *continued*

Scientific Name	Common Name	Item Number
Persea americano	Avocado pear	0437
Petsasi	Chinese cabbage	0374-0375
Petroselinum crispum	Parsley	0411
Phaseolus aureus	Mung bean	0358-0359, 0288-0289
Phaseolus lunatus	Lima bean, sugar bean, white bean	0280-0287
Phaseolus vulgaris	Red peas, snap bean, string beans, kidney beans	0290-0292, 0355-0357
Phoenix dactylifera	Date	0519
Phyllanthus acidus	Otaheite gooseberry, jimbling	0547
Pimento dioicia	Pimento, allspice	0879-0881
Piper nigrum	Pepper, black, white	0878
Pisum sativum	Green pea, split pea, garden pea	0299-0304
Prunus spp	Cherries, prune	0560-0561
Prunus armeniaca	Apricot	0508
Prunus dulcis	Almond	0322-0324
Prunus persica	Peach	0550-0552
Pseudupeneus spp.	Goat fish	0723
Psidium guajava	Guava	0527-0529
Punica granatum	Pomegranate	0559
Pyrus communis	Pear	0553-0554
Rana spp.	Frog	0793-0795
Raphanus sativus	Radish	0423, 0471
Ribes spp.	Currants	0517
Roccus americanus	White perch	0741
Saccharum officinarum	Sugarcane	0261
Salmo gairdneri	Trout	0761
Salmo spp.	Salmon	0744-0745
Sardinella spp.	Sardine	0746-0748
Scarus spp.	Parrot fish	0740
Sciaena spp.	Jew fish	0733
Scomber spp.	Mackerel	0735-0738
Scomber cavalla	King fish	0734
Secale cereale	Rye	0139-0140
Sechium edule	Chocho, christophene, chayote	0446-447, 0387
Sepia spp.	Squid	0788

Scientific Name	Common Name	Item Number
Seriola spp.	Amber Jack	0698-0699
Sesamum indicum	Sesame	0344-0346
Sillago silama	Whiting, Banga Mary	0766-0771
Solanum melongena	Egg plant, garden egg, melongene, aubergine	0450-0451
Solanum tuberosum	Irish potato, white potato	0232-0238
Sorghum bicolor	Sorghum	0141
Sparisoma spp.	Parrot fish	0740
Sphyraena spp.	Barracuda	0701
Spinacia oleracea	Spinach	0424-0427
Spondias mombin	Hog plum	0531
Syzygium cumini	Java plum	0533
Syzygium jambos	Rose apple	0564-0565
Syzygium malaccense	Malacca apple, otaheite apple	0539
Tamarindus indica	Tamarind	0573, 0881
Tarpon atlanticus	Tarpon	0759
Tetragonia expansa	New Zealand spinach	0428
Thiara asparata Linn	Fresh water snail	0788
Thunnus spp.	Bonito	0702
Thunnus thynnus	Tuna	0762-0765
Thymus vulgaris	Thyme	0882
Tilapia mossambica	Tilapia, grey perch, pink perch	0760
Triticum aestivum	Wheat	0211, 0142-0166
Upeneus spp.	Goat fish	0723
Vicia faba	Broad bean	0275-0277
Vigna unguiculata	Blackeye peas, cowpeas	0362-0363, 0293-0295, 0392-0393
Vitis spp.	Grapes	0525-0526
Vitis vinifera	Raisins, golden, seedless	0562-0563
Xanthosoma spp.	Yautia, tannia	0247
Z. mauritiana	Coolie plum, drinks	0534
Zea mays	Corn, maize, sweet corn	0103-0122
Zingiber officinale	Ginger	0455-0456
Ziziphus jujuba	Jujube	0534
Zrania spp.	Wildrice	0137

Annex

List and Amounts of Ingredients in Composite Dishes

Bread Pudding
(17% moisture loss on cooking)
454g enriched white bread
780g evaporated whole milk
200g egg
180g granulated sugar
75g raisins
60g margarine
24g wheat flour
2.7g salt
5g water

Chicken Fricassee
(9% moisture loss on cooking)
726g chicken (flesh and skin)
350g Irish/white potato
30g sweet pepper
120g soybean oil
120g canned tomato sauce
87g onion
7g garlic
12g salt
2g black pepper

Rice with Stewed Beans
64g white rice
33g white bean soup
2g vegetable oil
1g salt

Codfish Salad
198g codfish (deboned)
227g tomato
114g onion
108g olive oil
60g vinegar
6g salt

Fried Dumplings
(10% moisture loss; 15% fat gain)
230g wheat flour
23g skimmed milk powder
50g shortening
6g baking powder
6g salt
237g water

Stewed Red Beans
(17% moisture loss on cooking)
227g red kidney beans (peas)
113g Irish, white potatoes
56g ham
65g tomato sauce
27g vegetable oil
3g garlic
7g salt
1g coriander leaf
1440g water

Fried Green Plantain Slices
(46% moisture loss)
534g plantain, raw
54g corn oil
9g salt
288g water

Fruit Salad
243g grapefruit sections
211g orange sections
216g tangerine sections
287g ripe banana
287g ripe pawpaw
223g watermelon
423g canned pineapple

Meat Pie
(31% moisture loss on cooking)
454g lean ground beef
60g ham
60g salt pork
228g wheat flour
149g lard
60g tomato
30g sweet pepper
30g onion
11g baking powder
9g salt
60g water

Pumpkin Fritters
(21% moisture loss on cooking)
681g pumpkin
114g wheat flour
200g white granulated sugar
76g lard
5g salt
3g water

Stewed Codfish
(27% moisture loss on cooking)
250g dried codfish
195g sweet pepper
170g onion
27g vegetable oil
68g tomato
355g water

Stewed Pink Beans with Pig's Feet
(22% moisture loss on cooking)
117g pinto beans
390g pig's feet
205g pumpkin
15g vegetable oil
60g tomato puree
7g garlic
7g salt
736g water

Seasoned Beef
(34% moisture loss on cooking)
227g ground beef
120g tomato sauce
40g tomato
43g onion
22g sweet pepper
34g vegetable oil
5g garlic
5g salt

Stuffed Green Peppers
(27% moisture loss on cooking)
375g sweet pepper
227g lean ground beef
120g bread crumbs
240g tomato sauce
15g onion
5g salt
0.5g black pepper

Plantain and Tannia "Pasteles"
(16% moisture loss on cooking)
370g green plantain, peeled
384g coco, eddoe, taro, tannia, dasheen
155g chickpeas
454g pork
60g ham
60g salt pork
230g lard
240g whole milk
170g tomato
17g salt
10g hot pepper
3g coriander leaf
3g ground oregano
240g water

Rice with Vienna Sausage
(22% moisture loss on cooking)
454g white rice
240g Vienna sausage
40g salt pork
40g ham
47g soybean oil
60g tomato sauce
20g green olives
11g sweet pepper
22g onion
20g tomato
9g garlic
14g salt
488g water

Stew (Sancocho, Boil-up)
(52% moisture loss on cooking)
454g beef flank
454g spare ribs
56g ham
218g taro, coco, dasheen
184g yam
195g potato
178g pumpkin
280g green plantain
345g sweet potato
120g tomato sauce
38g vegetable oil
55g tomato
28g sweet pepper
28g onion
1g ground oregano
2928g water
